# Clinical Trial Protocol (Sample)

## Protocol Information

Protocol ID: PROT-1001
Study Title: Phase III Evaluation of Investigational Therapy
Phase: III
Sponsor: ABC Pharma
Version: 1.0

## Synopsis

Randomized, multicenter, double-blind study evaluating efficacy and safety of an investigational treatment compared with standard of care.

## Objectives

**Primary:** Evaluate efficacy based on the primary endpoint.
**Secondary:** Assess safety, quality of life, and secondary efficacy outcomes.

## Study Design

Parallel-group, randomized, double-blind, multicenter clinical trial with approximately 500 participants across multiple sites.

## Study Population

Adults meeting protocol-defined eligibility criteria and providing written informed consent.

## Inclusion Criteria

1. Age ≥18 years.
2. Signed informed consent.
3. Meets disease-specific eligibility.
4. Able to comply with study procedures.

## Exclusion Criteria

1. Participation in another interventional study.
2. Significant uncontrolled medical conditions.
3. Known hypersensitivity to study medication.

## Treatment Plan

Eligible participants will be randomized 1:1 to investigational product or control. Treatment duration: 24 weeks with scheduled follow-up.

## Schedule of Assessments

Screening, Baseline, Weeks 4, 8, 12, 16, 20, 24, End of Treatment, and Follow-up visits.

## Safety Monitoring

Adverse events, serious adverse events, laboratory assessments, vital signs, ECGs, and Data Monitoring Committee reviews.

## Statistical Analysis

Primary efficacy analysis will follow the intention-to-treat principle. Safety analyses will include all treated participants.

## Ethics

The study will be conducted in accordance with ICH-GCP, the Declaration of Helsinki, and applicable regulatory requirements.
